

GSG ELEVATE 2026

STRATEGIC ALIGNMENT

Positioning, Messaging and Buyer Segmentation

WE WILL TECHNOLOGY

Agentic Software Quality for faster, safer release decisions

Prepared by **Digify**

Consultant: **Rajai Nuseibeh**

Executive Summary

We Will Technology should position as an Agentic Software Quality company in Saudi Arabia. Vibe Test is its lead Agentic QA product. Business Care Quality (BCQ) informs the product; BCQ Expert Services add human judgment for consequential decisions.

The primary buyers are growth-stage product companies with active releases and budget. Funded MVP teams qualify selectively with an executable build and confirmed payer. Lead with a paid Vibe Test proof of value, then convert documented results into subscriptions. Internal QA retains product context and decision ownership.

I. Purpose and Strategic Approach

This assignment aligns **We Will Technology's** positioning, value proposition, priority buyers, buyer pain points, offer hierarchy, use cases and messaging before Phase 2 implementation begins. The recommendations reflect the latest leadership discussions, company submissions, product information, previous GSG assessment, approved Scope of Work and current commercial patterns in autonomous testing, continuous quality and managed quality services.

The direction prioritizes the offer that creates the clearest buyer value, can be demonstrated credibly, supports a realistic route to conversion and can be implemented consistently across the contracted brand, website, sales and content deliverables.

II. Current Commercial Reality and Recommended Direction

We Will Technology has testing, automation and release-support experience, but sales still depend heavily on referrals. Its multi-market ambitions exceed its present marketing capacity.

Vibe Test is the emerging recurring-revenue asset: an Agentic QA platform for testing applications, finding issues and re-verifying changes. It is approaching commercial readiness, so initial adoption should be guided through bounded proofs of value.

BCQ links technical evidence to customer and business risk. It informs Vibe Test and is also delivered through separately scoped expert services. The website and sales narrative need to clarify this architecture.

Address international-buyer concerns with specific access and delivery-continuity safeguards.

RECOMMENDED DIRECTION

Compete in Agentic Software Quality in Saudi Arabia. Lead with Vibe Test, apply BCQ methodology, and scope BCQ Expert Services for complex or consequential decisions.

III. Positioning and Value Proposition

Recommended market category

Agentic Software Quality

We Will Technology should position as an Agentic Software Quality company. Vibe Test applies Agentic QA to recurring verification; BCQ connects quality evidence to customer impact, business risk and release decisions.

Describe Vibe Test as an Agentic QA platform. Retain buyer search terms such as AI software testing, autonomous testing, regression testing and release verification.

Priority customer

Saudi growth-stage SaaS and digital-product companies with live products, recurring releases, lean quality capacity, a technical owner and an identifiable budget.

High-value buyer problem and intended outcome

Software output is accelerating while manual or brittle verification struggles to keep pace. Engineering leaders need reliable evidence across critical journeys and emerging AI behaviour before deciding whether to release.

Positioning statement

For Saudi product teams seeking faster, safer releases, We Will Technology combines recurring verification through Vibe Test with BCQ-informed quality judgment. It shows what has been verified, what risk remains and when expert review is needed.

Meaningful differentiators

- **Product plus judgment.** Vibe Test verifies; BCQ connects evidence to customer and release risk; expert services support consequential decisions.
- **AI-assisted development and AI-enabled features.** Vibe Test verifies rapidly changing software; WE WILL's AI Feature Evaluation approach addresses AI-feature behaviour.
- **Potential AI Feature Evaluation differentiation.** Publish this claim only after WE WILL documents its framework, criteria, thresholds, outputs and customer evidence; do not claim protected IP without substantiation.
- **Regional delivery and controlled adoption.** Saudi market access and a paid proof of value support credible entry.

Competitors demonstrate demand for autonomous testing, usage-based packaging and expert support. WE WILL should prove a focused Saudi use case, costed execution and business-level release judgment. Internal QA retains product context and decision ownership.

IV. Priority Buyer Segments and Pain Points

Segment and profile	Buyer trigger and pain	Buyer outcome / concern	Lead offer
Growth-stage Saudi product teams — PRIMARY; live product, releases, budget	CTO: regression backlog, defects and release delay	More coverage; reliable proof, integration and cost	Paid Vibe Test proof; Team subscription
Enterprise digital teams — SECONDARY; consequential Saudi platforms	Digital leader: major launch or AI feature with release risk	Accountable decision; security and continuity	BCQ Expert Services; Vibe Test as relevant
Funded MVP / pre-launch — SELECTIVE; build and confirmed payer	Founder or CTO: pilot or launch; limited QA capacity	Bounded evidence and certain payment	Prepaid or sponsor-funded proof
Venture portfolios — SELECTIVE; multiple products	Portfolio CTO: simultaneous launches, uneven verification	Repeatable approach and controlled setup	Portfolio proof; Enterprise / BCQ expansion

SEGMENTATION RULE Growth-stage companies lead direct acquisition. MVP-stage teams qualify with an executable build, defined validation need and confirmed payer. Agree payment before delivery.

V. Product and Service Hierarchy, Packaging and Priority Use Cases

We Will Technology helps digital-product teams verify critical software journeys, understand release risk and ship with greater confidence.

Recommended commercial hierarchy

Level	Offer	Role in the commercial system	Primary audience
Master brand	We Will Technology	Company identity, contracting and Agentic Software Quality proposition	All buyers
Lead product	Vibe Test by We Will Technology	Agentic QA; principal acquisition and subscription offer	Product and engineering teams
Methodology	Business Care Quality	Connects evidence with customer impact, business risk and release decisions	Across relevant offers
Expert services	BCQ Expert Services	Separately scoped Diagnostic, Release Decision and Managed Quality Care	Higher-risk teams
Specialized use case	AI Feature Evaluation	WE WILL-developed approach executed through Vibe Test; differentiation requires documented proof	AI product teams

Lead with Vibe Test for recurring verification. Offer BCQ Expert Services when the buyer needs quality strategy, risk interpretation or accountable release support.

Recommended Vibe Test packages

Package	Intended customer	Scope and qualification	Commercial mechanism
Guided Proof of Value	Live product or executable MVP; technical owner and payer	One environment; 2–3 journeys or one release workflow; agreed success criteria	Fixed-scope paid engagement; confirmed sponsor may pay
Vibe Test Team	Growth-stage team with recurring releases	Defined workspaces, execution allowance, environments and support	Monthly or annual subscription
Vibe Test Enterprise	Large or multi-product buyer	Higher usage; agreed integration, access, reporting and support	Annual custom agreement; expert work separately scoped

Packaging principle: use a subscription with an included execution allowance reflecting platform cost and buyer value. Confirm pricing after validating usage economics.

Before publishing prices, validate execution costs, typical usage, onboarding, support, environments, concurrency, margins and overage rules.

BCQ Expert Services

Quality Diagnostic: fixed-fee review of product and release risks. **Release Decision:** fixed-fee review of evidence and go / no-go criteria. **Managed Quality Care:** monthly expert oversight, with platform usage separately scoped.

Priority use cases

Priority use case	Trigger and solution	Outcome	Evidence needed
1 Release verification	Frequent releases; Vibe Test on critical journeys	Faster evidence-based cycles	Demo and pilot
2 AI-assisted development	Output exceeds QA; Vibe Test on changes	Verification keeps pace	Proof of value
3 AI Feature Evaluation	AI-feature launch; WE WILL approach executed by Vibe Test	Evidence against risk criteria	Framework, thresholds, outputs and customer proof
4 Release decision	High-impact launch; BCQ Expert Services with test evidence	Accountable go / no-go advice	Approved engagement
5 Lean-team quality	Limited QA leadership; Vibe Test plus Managed Quality Care	Scalable quality capacity	Customer workflow and service proof

VI. Messaging Architecture

- **One-sentence description.** We Will Technology combines Vibe Test Agentic QA with BCQ methodology and expert judgment to help product teams release with confidence.
- **Elevator pitch.** Software teams build faster than manual verification can scale. Vibe Test verifies critical journeys, finds issues and re-checks fixes. BCQ connects the evidence to customer and release risk, while BCQ Expert Services provide human judgment when needed. Together they increase quality capacity and release confidence.

- **PRIMARY HEADLINE:** Know what is safe to ship - at the speed you build.
- **Supporting subheadline:** Vibe Test verifies critical journeys using WE WILL's quality methodology; BCQ Expert Services add human judgment where risk requires it.
- **Core value proposition:** Continuous verification and accountable quality judgment for release decisions.

Pillar	Buyer message and problem	Capability and outcome	Proof / audience
Verification at release speed	Scale QA capacity as repetitive work grows	Vibe Test verifies and re-verifies critical journeys	Demonstration; growth-stage CTO / QA
Customer and business risk	Prioritize customer consequences over test counts	BCQ connects evidence to release decisions	Diagnostic; product / enterprise
AI-assisted and AI-enabled quality	Verify faster builds and assess uncertain AI behaviour	WE WILL criteria executed by Vibe Test; expert interpretation as needed	Framework and output; CTO / AI owner
Accountable automation	Automate checks while humans own consequential decisions	Product evidence with expert escalation	Workflow and controls; enterprise

- **Primary CTA:** Run a guided Vibe Test proof of value.
- **Secondary CTA:** Discuss a BCQ Expert Services requirement.

I. Phase 2 Implementation Priorities

Phase 2 will apply this direction across four contracted workstreams: (1) refine the We Will Technology identity and endorsed Vibe Test treatment; (2) optimize the homepage and one or two priority pages with proof and conversion paths; (3) produce the sales deck, two one-pagers, proposal template, two use-case sheets and follow-up set; and (4) develop the LinkedIn strategy and 12-week content plan. WE WILL must supply product evidence, approved claims and the AI Feature Evaluation framework before related differentiation is used externally.
