5	The exact SEO content on every page	19
6	Easy to use and quick to load, for everyone	27
7	Arabic and English	27
•	A final word	28

BEFORE WE BEGIN

A quick word before you dive in

This report is a guided tour of your website's new structure. We'll walk you through why each page is there, what people see when they land on it, and how we've set it up so the right buyers can find you on Google. Whenever a technical term pops up, we'll tell you what it actually means for you.

In short: your website now tells one clear story. WE WILL Technology is an **Agentic Software Quality** company that helps product teams *know what is safe to ship, at the speed they build*. Vibe Test is the lead product, and it now lives on wewill.tech itself. Business Care Quality (BCQ) is the methodology behind it, and BCQ Expert Services add human judgment when a release carries real risk. Every page, from the main menu to the last button, leads to one next step: **Run a Guided Vibe Test**.

We did this **without changing how WE WILL looks**. Your colours, fonts and components are the ones you already know. As the Brief asked, we reused, regrouped and relocated your existing approved content first, and only wrote new copy where a block didn't exist yet.

What	Where things stand
Pages	11 pages in the new structure. 9 are open to Google and listed in the sitemap; Privacy Policy and Terms of Use stay out of Google until their legal text is ready
Main menu	Home, Vibe Test, Solutions, Resources, About, plus one highlighted button: Run a Guided Vibe Test
Home	14 long sections trimmed to 8 focused blocks, in the exact order the Brief set
Vibe Test	Moved from a separate address (vibe-test.oneapp.dev), which had no page title or description, onto wewill.tech/vibe-test/
Solutions	Organised around your five approved buyer problems instead of an internal list of services
Strategy fit	All 30 page blocks in the Brief are in place, in the Brief's order
Honesty	No invented numbers, quotes or claims. Sample material is labelled "Sample", and anything still missing is a clearly marked placeholder
Search health	Every public page has exactly one main heading, a description that fits in full in Google, and structured data; old duplicate pages are kept out of search results
Look and feel	Unchanged: same WE WILL colours, fonts (Inter, Geist, and Tajawal for Arabic) and components

What guided our work

Two documents shaped every decision. The first is the **Strategic Alignment 2.0**: Positioning, Messaging and Buyer Segmentation (GSG Elevate 2026, prepared by Digify / Rajai Nuseibeh). It sets out who WE WILL is, who it sells to and what it offers. The second is the **Website Optimization & Information Architecture Brief**, which turns that strategy into pages, blocks and buttons, and tags each block as REUSE, EDIT or NEW. We followed those tags. New wording comes from the Strategic Alignment's approved phrasing and is marked as a draft for your approval.

Now and then the two documents said slightly different things. When that happened we didn't quietly pick one; we found a way to respect both:

Where they differed	What we did
Main button: "Run a guided Vibe Test proof of value" (Strategic Alignment) or "Run a Guided Vibe Test" (Brief)	The button uses the Brief's shorter label everywhere. "Proof of value" appears right next to it, in the closing copy and on the contact page
Secondary button: "Discuss a Business Care Quality Requirement" (Brief, footer) or "Discuss a Quality Requirement" (Brief, Home)	Buttons inside pages use the short label; the footer and the contact form use the full one
The Home hero should "clarify the target buyer", but the approved headline names no buyer	We kept the approved headline word for word and added the Brief's primary buyer as one line underneath, marked as a draft

SECTION 1

The new sitemap

Think of a sitemap as the floor plan of your website: which rooms exist and how they connect. Here's yours, with the main menu along the top and the sections inside each page underneath.

Your main menu now reads **Home, Vibe Test, Solutions, Resources, About**, with a highlighted **Run a Guided Vibe Test** button on the right and the EN | AR switch beside it. That's exactly the menu the Brief recommends. We kept it short on purpose: a busy CTO should be able to glance at it and understand what WE WILL does and where to start. Every section listed under a page has its own link, for example /solutions/#release-decision, so you can send a prospect straight to the part that fits them.

Page	Web address	What it's there for
Home	wewill.tech/	Positioning and routing: the whole story in eight blocks
Vibe Test	wewill.tech/vibe-test/	Your lead product, explained and proven
Solutions	wewill.tech/solutions/	The five release situations buyers face, and how WE WILL helps with each

Page	Web address	What it's there for
Resources	wewill.tech/resources/	Your insights and background methodology in one place
About	wewill.tech/about/	Company story, team, quality philosophy and credibility
Contact	wewill.tech/contact/	Where every button leads; the form adapts to the offer the visitor picked
Blog	wewill.tech/blog/	The full article listing, reached from Resources and the footer
Article	/blog/the-triad-quality-framework/	The Triad Quality Framework
Article	/blog/when-software-quality-becomes-a-business-decision/	When software quality becomes a business decision
Privacy Policy	wewill.tech/privacy/	Legal page, linked from the footer (text to come from you)
Terms of Use	wewill.tech/terms/	Legal page, linked from the footer (text to come from you)

The footer

The footer follows the Brief's six groups, so anyone who scrolls to the bottom finds every important link in one tidy place:

Footer group	Links
Product & Solutions	Vibe Test · Solutions
Company	About · Contact
Resources	Blog · Methodology resources
Get Started	Run a Guided Vibe Test · Discuss a Business Care Quality Requirement
Legal & Social	Privacy Policy · Terms of Use · LinkedIn · Facebook · WhatsApp · Instagram (all four social links from the old footer are kept)
Bottom bar	"Vibe Test by WE WILL Technology" · © 2026 WE WILL Technology (the old footer still said © 2023)

The Brief lists a Cookie Policy "if applicable". Today the site sets no cookies and loads no analytics, so we left it out. If you add analytics later, a Cookie Policy link should join the Legal group.

SECTION 2

How visitors move through the site

Your Brief describes five stages your priority buyer goes through before getting in touch: CTOs, engineering leaders and founders in growth-stage SaaS and digital-product companies, with Saudi Arabia as the beachhead. Instead of just describing those stages, we built them into the site, so each block gently leads to the next.

1. Land "WE WILL helps product teams know what is safe to ship"	2. Recognise "That's my release situation"	3. Evaluate "Vibe Test, or the right use case, fits"	4. Trust "Real clients, real evidence, real experts"	5. Convert Run a Guided Vibe Test
---	--	--	--	---

Stage	Where it happens on the site
1. Land	The Home hero: the category line "Agentic Software Quality", the approved headline "Know what is safe to ship at the speed you build", the line naming who it's for, and the "How a release earns its GO" track
2. Recognise	"Which release situation are you facing?" on Home, with five cards, each linking to its section on Solutions
3. Evaluate	The Vibe Test introduction on Home, the full Vibe Test page, and the five use cases on Solutions
4. Trust	The client-logo strip right under the hero, three selected testimonials, the sample receipt and product video, the WE WILL expert layer, and the Credibility block on About
5. Convert	Run a Guided Vibe Test, which opens the contact form with the Guided Proof of Value already selected. Enterprise and higher-risk buyers take the second path: Discuss a Quality Requirement

One clear next step

The old site had several buttons competing for attention: Book a Clarity Session, Book a Demo, Start a Vibe Test, Talk to WE WILL, Explore Services. Each made sense on its own, but together they left visitors unsure which to click, and "Start a Vibe Test" sent them away to another domain. Now there's one main action everywhere, and every other button has a clear supporting role:

Button	Role	Where you'll find it
Run a Guided Vibe Test	The main action	Header (desktop and mobile), Home hero and closing block, Vibe Test hero and closing block, Solutions use cases 1 to 3, footer
Discuss a Quality Requirement	Enterprise and higher-risk path	Home expert layer and closing block, "Product plus judgment" on Vibe Test, Solutions use cases 3 to 5, footer (full label)
Explore Vibe Test · Explore Solutions · View Resources	Routing only	Home only, as the Brief asks, so they guide without competing with the main action

Button	Role	Where you'll find it
Talk to Us · Contact	General enquiries	About (Credibility block) and the footer

The contact page meets visitors where they are

Both main buttons lead to the contact page, but it doesn't treat everyone the same. The form reads which button was clicked and pre-selects the matching request type. It then shows a short panel for that offer. For the Guided Vibe Test, that's *"Guided Proof of Value: one environment, 2–3 journeys or one release workflow, and agreed success criteria"*, followed by who it's for: *"teams with a live product or executable MVP and a technical owner."* Next to the send button, visitors see *"We'll be in touch within 1 business day."* So a prospect always knows what they're asking for and what happens next.

Ready for tracking. Every button carries two small hidden labels: which offer it is and which block it sits in, for example `data-cta="guided-vibe-test"` and `data-cta-location="home-hero"`. Once you add Google Tag Manager or similar, you'll be able to see exactly which block on which page produced each lead, with no extra development.

SECTION 3

A walk through every page

This is the heart of the report. For each page you'll find a quick summary, what visitors actually see, and a short note on how Google sees it. The tags show how the Brief classed each block:

REUSE existing content, **EDIT** existing content, or **NEW**.

3.1 Home

Web address	wewill.tech/
Its job	Establish the proposition, introduce Vibe Test, surface buyer problems, build trust and drive the next action
Search themes	agentic QA, release verification, continuous software quality
Labels for Google	Organization, WebSite

What visitors see

The old Home page was one very long scroll of 14 sections. It now has the 8 blocks the Brief set, in the Brief's order:

#	Block	What it does
1	Hero EDIT	Opens with the category "Agentic Software Quality", the approved headline " <i>Know what is safe to ship at the speed you build</i> " and the approved subheadline. One line names the buyer: CTOs, engineering leaders and founders in growth-stage SaaS and digital-product companies. The "How a release earns its GO" track from the old hero stays.
2	Social proof strip EDIT	The large client wall used to sit near the bottom. It's now a compact strip right under the hero, with 10 logos: One Studio, ID8 Media, Darent, iStoria, Masterteam, MICETribe, SellEnvo, Famcare, Rasel and I Plan 2. We also fixed two logos whose descriptions named the wrong company.
3	Vibe Test introduction EDIT	"Vibe Test by WE WILL Technology", described as your Agentic QA platform, with the product video, three capability cards and a receipt clearly labelled "Sample". The button now goes to your own Vibe Test page instead of opening another website.
4	Buyer problems NEW	"Which release situation are you facing?" Five cards, one per approved use case, each linking to its section on Solutions.
5	WE WILL expert layer EDIT	A simple three-layer picture: Vibe Test (lead product), BCQ Expert Services (Quality Diagnostic, Release Decision, Managed Quality Care) and the Business Care Quality methodology underneath. Button: Discuss a Quality Requirement.
6	Selected proof EDIT	Three testimonials, word for word: iStoria, Darent and SellEnvo. The old version repeated seven quotes as 29 moving cards, with one quote appearing twice in the same row.

#	Block	What it does
7	Selected resources REUSE	The Triad Quality Framework, "When software quality becomes a business decision" and the Interview with Our Founder. Button: View Resources.
8	Final conversion EDIT	"Let's Talk About Your Product's Quality." with both buttons side by side. The long form now lives only on the contact page.

Where the other old sections went. Nothing was thrown away. Team and Why WE WILL moved to About; Services and How We Work moved into Solutions; Quality Canvas moved to Resources. Three sections are resting for now: the AI-Era Quality promo (its offer now lives on Solutions); "Our Methodology", which describes an AI Feature Evaluation method the Strategic Alignment asks us to publish only once the framework is documented; and "Impact", whose figures have no source on file yet. Their files are kept, ready to return once approved.

How Google sees it

The Home page is where Google first gets to know WE WILL, so it carries your organisation profile behind the scenes: name, logo and social profiles, plus a website label that lists both English and Arabic. Its description leads with your headline and includes the buyer terms "agentic QA" and "release verification". It links to each Solutions section with descriptive wording ("Release verification", "Release decision" and so on), which helps those sections rank for their own topics.

3.2 Vibe Test (lead product)

Web address	wewill.tech/vibe-test/
Its job	Explain the product's value, how it works and the evidence, and start the guided proof of value
Search themes	agentic QA, autonomous testing, regression testing, release verification
Labels for Google	SoftwareApplication (no price or rating), Organization

What visitors see

Vibe Test used to live on a separate address, vibe-test.oneapp.dev. It's now a proper page inside wewill.tech, with your header, footer and language switch. The strong, product-first content was kept, and the Brief's two missing pieces were added.

#	Block	What it does
1	Product hero REUSE	"Vibe Test by WE WILL Technology" above the original line <i>"Tests. Fixes. Verifies. Hands you the receipts."</i> , with the live QA run terminal. "Book a Demo" became Run a Guided Vibe Test.
2	Problem REUSE	"Shipping is easy. Proving it works is not."
3	What it does REUSE	"Verify critical journeys. Detect issues. Re-verify fixes." with the three capability cards
4	How it works REUSE	"A closed loop. Not a checklist." Discover, Fix, Verify, Ship

#	Block	What it does
5	Capabilities & evidence REUSE	"Five agents. One QA team." and "Evidence, not claims." The receipts are labelled "Sample", the product video is here, and there's a marked spot for real product screenshots
6	Who it's for EDIT	"Built for teams without a QA team" (solo developers, early startups) became <i>"Built for product teams with live products and recurring releases."</i> , matching your approved buyer segments
7	WE WILL connection NEW	"Product plus judgment." Shows how Vibe Test, the BCQ methodology and BCQ Expert Services fit together. Button: Discuss a Quality Requirement
8	Conversion EDIT	"Ship with confidence." The generic demo became the Guided Proof of Value, with its scope, who qualifies, and the three next steps: Guided Proof of Value, Evidence Review, Team Subscription. No prices, as the Strategic Alignment asks

How Google sees it

The old Vibe Test page had no title, no description and no language label, so Google had very little to go on, and whatever authority it earned stayed on another domain. Now it has its own title, description and product label, and it builds authority for wewill.tech instead of competing with it. The page keeps the old section links (#problem, #how, #services, #receipt, #who, #book), so once the old address redirects here, every old link lands on the matching section.

3.3 Solutions

Web address	wewill.tech/solutions/
Its job	Organise the offer around the buyer's problem, not an internal services catalogue
Search themes	software release verification, AI software testing, AI feature evaluation, release decision support, managed QA
Labels for Google	Service (Quality Diagnostic, Release Decision, Managed Quality Care), Organization

What visitors see

The page opens with *"Solutions for the release situations product teams face."* and jump links to the five use cases. Each use case follows the same shape: the situation, how WE WILL helps, the outcome, and the right button. All five come straight from the Strategic Alignment's priority use cases:

#	Use case	Situation	How WE WILL helps	Button
1	Release verification	Frequent releases	Vibe Test on critical journeys, for faster evidence-based cycles	Run a Guided Vibe Test
2	AI-assisted development	Output exceeds QA capacity	Vibe Test on changes, so verification keeps pace	Run a Guided Vibe Test
3	AI Feature Evaluation	An AI-feature launch	The WE WILL approach executed through Vibe Test: evidence against risk criteria	Both buttons

#	Use case	Situation	How WE WILL helps	Button
4	Release decision	A high-impact launch	BCQ Expert Services with test evidence, for accountable go / no-go advice	Discuss a Quality Requirement
5	Lean-team quality	Limited QA leadership	Vibe Test plus Managed Quality Care, for scalable quality capacity	Discuss a Quality Requirement

Below the use cases, **Methodology & supporting capabilities** **EDIT** brings together your existing capability copy, word for word, from the old Services section and the AI-Era Quality page: Quality as a Service, Risk Prevention for Releases, Quality Strategy, User Journey Testing, Release Readiness Reviews, Role-Aware Security Testing and Risk Reports for PMs. Each is tagged with the use cases it supports. The four-step "A Quality Process Built Around Decisions" follows.

Proof sits beside the problem it proves **EDIT** : Darent next to Release verification, iStoria next to Release decision and SellEnvo next to Lean-team quality. Use cases 2 and 3 have marked placeholders until you share evidence for them. One careful detail: AI Feature Evaluation is described only as a "WE WILL-developed approach executed through Vibe Test". The Strategic Alignment asks us not to claim a unique method or protected IP until the framework, criteria and customer proof are documented.

How Google sees it

This page is the natural home for most of the Brief's seed search terms, because each use case heading is a phrase buyers actually type: release verification, AI-assisted development, AI feature evaluation, release decision. Each BCQ Expert Service is also labelled for Google as a service WE WILL provides.

3.4 Resources

Web address	wewill.tech/resources/
Its job	Build authority and give your existing content a home
Search themes	software quality insights, Business Care Quality methodology
Labels for Google	CollectionPage listing both articles (BlogPosting), WebSite, Organization

What visitors see

Your insight content used to be scattered across the Blog, a set of cards on Home and the Quality Canvas section, none of which had a place in the new menu. Resources gathers it in two blocks. **Insights** **REUSE** opens with *"Insights, quality thinking, and product lessons."* and shows both articles and the founder interview, with a link to the full blog. **Background methodology** **EDIT** explains in one line how BCQ links technical evidence to customer and business risk, then shows the Business-Care Quality and Quality Canvas cards and the full Quality Canvas section, including "Generate Your Quality Canvas".

A small fix with a big effect: the Business-Care Quality card on the old site linked to a page that doesn't exist (it returned a "page not found" error). It now points to the methodology section on Solutions.

How Google sees it

The page tells Google it's a collection of articles. It links into Solutions and Vibe Test, passing the authority your articles earn on to your commercial pages.

3.5 About

Web address	wewill.tech/about/
Its job	Company credibility: who WE WILL is and how it thinks about quality
Search themes	WE WILL Technology, Agentic Software Quality company
Labels for Google	AboutPage, WebSite, Organization

What visitors see

WE WILL didn't have a company page before; the team and philosophy were buried in the long Home page. About now has the Brief's four blocks. **Company story** **EDIT** opens with *"WE WILL Technology is an Agentic Software Quality company."*, the first time the site states your approved category plainly, plus a marked spot for your short company background and the founder interview. **Team** **REUSE** shows the existing team section as it was. **Quality philosophy** **EDIT** reuses "Quality That Thinks With You, Not After You." (Business-Care Quality, Risk-Driven Thinking, Strategic Partnership) and closes with the Strategic Alignment's line *"Internal QA retains product context and decision ownership."* **Credibility** **REUSE** shows the client-logo strip and a Talk to Us button, without repeating the whole Home proof stack.

How Google sees it

This is usually the page Google shows when someone searches for WE WILL by name. Having your category, story and team together gives Google a clear, confident picture of who you are.

3.6 Contact

Web address	wewill.tech/contact/
Its job	Where every lead lands, with the right offer already selected
Where it sits	Behind every main button, and in the footer's Company group
Labels for Google	ContactPage, WebSite, Organization

The form keeps its existing fields, checks and spam protection. It adds one choice, **Request type** (General message, Run a Guided Vibe Test, or Discuss a Business Care Quality Requirement), which is pre-selected from the button the visitor clicked and explained by the offer panel described in Section 2. Its new title and description are built from your approved messaging.

The page's headline, *"Let's Talk About Your Product's Quality."*, is now its main heading (H1), so Google reads it as the topic of the page. The form sends to `/contact-submit.php` on your live server, which needs to accept the new `request_type` field so each lead keeps the offer it asked for.

3.7 Blog and articles

Web addresses	/blog/ · /blog/the-triad-quality-framework/ · /blog/when-software-quality-becomes-a-business-decision/
Its job	Your full article listing and the two articles, unchanged in content
Where it sits	Under Resources in the menu, and in the footer

The articles read exactly as before; the menu now highlights Resources while someone reads them. Three small improvements: each article is now labelled for Google as a blog post by WE WILL Technology; both descriptions were tightened to fit in full in search results; and the "Read the original WE WILL article" links, which led to a "page not found" error, have been removed in English and Arabic. One note for the live site: it addresses articles as /blog/?slug=..., while the new structure uses cleaner addresses like /blog/the-triad-quality-framework/, so the old form should redirect to the new one.

3.8 Privacy Policy and Terms of Use

Web addresses	wewill.tech/privacy/ · wewill.tech/terms/
Status	Clearly marked placeholders, waiting for your reviewed legal text
On Google	Kept out of search results on purpose (noindex) until the real text is in

The Brief asks for both links in the footer, so the pages exist and are linked, but they say plainly that the text will be supplied by WE WILL Technology. Once your legal adviser has signed off the wording, the noindex tag can come off.

3.9 Pages that left the menu, and where they went

Your live sitemap lists ten "one-section" pages that simply repeat a Home section word for word, plus the AI-Era Quality landing page. Google sees repeated text like this as duplicate content, which splits your search strength. In the new structure each of these has a proper home. We've already marked every one of these old pages *noindex*, so they stop competing with the new pages in Google while still opening for anyone with an old link. On the live site, the next step is a **permanent (301) redirect** from each to its new home, which sends visitors, and any search strength the old page built up, to the right place. Here's where each one should point:

Old address	Suggested new home	Why
vibe-test.oneapp.dev (any path)	/vibe-test/	Same section links kept, so old anchors land in the right place
/ai-era-quality-services/	/solutions/	Its capability copy now lives in Solutions › Methodology
/services/	/solutions/#methodology	Moved to Solutions
/how-we-work/	/solutions/#how-we-work	Moved to Solutions
/genai-based-systems/	/solutions/#ai-feature-evaluation	Closest approved topic

Old address	Suggested new home	Why
/why-we-will/	/about/#philosophy	Now About › Quality philosophy
/team/	/about/#team	Now About › Team
/clients/	/about/#credibility	The logo strip lives on Home and About
/success-stories/	/#success-stories	Now Home › Selected proof
/quality-canvas/	/resources/#quality-canvas	Now Resources › Background methodology
/knowledge/	/resources/	Now Resources › Insights
/impact/	/	Its figures are resting until a source is confirmed

SECTION 4

The SEO groundwork behind the whole site

Good search results come partly from each page and partly from the groundwork underneath. Here's what we've put in place across the whole site, and why it matters to you.

Speaking your buyers' language

The Brief lists seed search terms "for the website team to validate through keyword research". We gave each one a natural home, in page descriptions, headings and the text itself. Following the Brief's own note, the Saudi-specific terms are mapped but not yet written into the copy; they go in once research confirms real search demand.

What people search for	Where it lives on the site
agentic QA / agentic software testing	Home (category line, description) and Vibe Test (description, product hero)
autonomous QA testing / autonomous software testing	Vibe Test (description) and Home ("autonomous QA that hands you the receipts")
software release verification / release readiness testing	Solutions (use case 1, "Release Readiness Reviews"), plus the Home and Vibe Test descriptions
AI software testing / AI-assisted development testing	Solutions (use case 2)
AI feature testing / AI feature evaluation	Solutions (use case 3, and its description)
continuous software quality / continuous QA	Home expert layer ("Continuous verification and accountable quality judgment...") and Solutions
QA as a service / managed QA services	Solutions ("Quality as a Service", Managed Quality Care), framed as expert care rather than generic outsourcing
software quality consulting / release decision support	Solutions (use case 4 and the BCQ Expert Services labels)
software testing / QA services / AI testing Saudi Arabia	Mapped to Home, Solutions and Vibe Test; held back from the copy until validated

The Strategic Alignment also asks to keep four buyer terms: AI software testing, autonomous testing, regression testing and release verification. All four appear in the Vibe Test description.

Fewer pages, but stronger ones

The live sitemap lists 16 addresses, and 10 of them repeat Home content word for word. The new sitemap lists 9 pages, each with one clear job and its own title, description and main heading. That gives each page a real chance of ranking for its topic instead of competing with copies of itself.

Honest from top to bottom

Every claim on the site traces back to your existing website or your Strategic Alignment. There are no invented numbers anywhere. The old Impact figures and the AI Feature Evaluation method text are resting until they can be backed up; the Vibe Test receipts are clearly labelled "Sample"; testimonials are word for word; and gaps are marked placeholders rather than filler. That protects your credibility with exactly the kind of careful, technical buyer you're targeting.

The technical groundwork, in plain English

What it is	What it means for you
Consistent page titles	Every title follows one pattern, "WE WILL Tech Page", short enough that Google never cuts it off
Unique descriptions	Every page has its own summary for Google, written from your approved messaging
Canonical tags	Each page names its official wewill.tech address, so copies and tracking links never compete with the original
Social sharing settings	Links shared on LinkedIn, WhatsApp or X show a proper title, description and a branded image made for that page. The site name now reads "WE WILL Technology" (it used to say "WE WILL")
Structured data	Behind-the-scenes labels that tell Google who WE WILL is, what Vibe Test is and which services you offer (table below)
Sitemap file	A list of the 9 public pages for Google to read (shown in full in Section 5)
Kept out on purpose	Privacy Policy and Terms of Use carry a noindex tag until their real text exists, and so do the old one-section pages, so they no longer compete with the new ones
Image sizes	Images declare their size, so pages don't jump while loading. A small 112-pixel copy of the Vibe Test logo replaces the large original where it's shown small
Lead tracking hooks	Every button is labelled for analytics (Section 2)

Type of label	Where it's used	What it tells Google
Organization, WebSite	Home	Who WE WILL Technology is: name, logo, social profiles, and that the site is in English and Arabic
SoftwareApplication	Vibe Test	That Vibe Test is a software product by WE WILL Technology (no price or rating, as none is published)
Service	Solutions	That Quality Diagnostic, Release Decision and Managed Quality Care are services WE WILL provides
CollectionPage, BlogPosting	Resources	That the page is a collection of your articles
AboutPage	About	That this is the company's own page about itself

Type of label	Where it's used	What it tells Google
ContactPage	Contact	That this is how to reach WE WILL Technology
BlogPosting	Both articles	That each article is a blog post published by WE WILL Technology, with its cover image

SECTION 5

The exact SEO content on every page

Section 3 explained the thinking behind each page. This section is your handy reference: the actual titles, descriptions and settings on every page, taken from the finished build on 30 September 2026.

A few words to help you read the tables

The **meta title** is the clickable blue headline people see in Google, and the **meta description** is the short summary underneath. Google usually shows around 60 characters of a title and around 155 of a description. The **main heading** (H1) is the page's biggest headline, and every page should have exactly one. **Links pointing here** counts how many links across your 11 pages lead to each page, which is a good sign of how central it is.

One note about keywords: Google stopped using the "keywords" tag to rank pages a long time ago, so we didn't add one. Your buyers' vocabulary does its work where Google actually reads it: the description, the headings and the words on the page.

At a glance

Page	Meta title	Title chars	Desc. chars	One H1	Google

Settings every page shares

These are the same on every page, so rather than repeat them eleven times, here they are once.

Page language	English (en). Arabic is switched in the browser on the same address (see Section 7)
Character set	UTF-8
Viewport	width=device-width, initial-scale=1
Indexing	Open to search engines, except Privacy Policy and Terms of Use (noindex)
Open Graph (social sharing)	og:title and og:description mirror the page; og:url = the canonical address; og:type = website; og:site_name = WE WILL Technology; og:locale = en_US, with ar_SA as the alternate
Twitter / X card	summary_large_image, with title, description and image mirroring Open Graph
Social image	A branded image generated for each page by og-image.php on your live server; the two articles use their own cover images
Fonts	Preconnect to fonts.googleapis.com and fonts.gstatic.com, then one stylesheet (Inter, Geist, Tajawal)
Organization profile	Name WE WILL Technology, also known as WE WILL; logo; LinkedIn, Facebook and Instagram profiles

Page by page

Here's the exact SEO content for every page. Heading counts cover the page's own content; the five small footer headings, which appear on every page, aren't counted.

5.1 Home

Main heading (H1)	Know what is safe to ship at the speed you build
Meta title	WE WILL Tech Home (19 characters)
Meta description	Know what is safe to ship at the speed you build: agentic QA and release verification with Vibe Test, plus BCQ expert judgment where risk requires it. (150 characters)
Official address	https://wewill.tech/
Social image	Branded image generated for this page
Labels for Google	Organization, WebSite
Headings	1 H1, 7 H2, 14 H3
On Google	Open to Google and listed in the sitemap
Links pointing here	33 links across the site

5.2 Vibe Test

Main heading (H1)	Vibe Test by WE WILL Technology · Tests. Fixes. Verifies. Hands you the receipts. (two lines)
Meta title	WE WILL Tech Vibe Test (24 characters)
Meta description	Vibe Test by WE WILL Technology is an Agentic QA platform for autonomous testing, regression testing and release verification of critical journeys. (147 characters)
Official address	https://wewill.tech/vibe-test/
Social image	Branded image generated for this page
Labels for Google	SoftwareApplication, Organization
Headings	1 H1, 8 H2, 17 H3
On Google	Open to Google and listed in the sitemap
Links pointing here	31 links across the site

5.3 Solutions

Main heading (H1)	Solutions for the release situations product teams face.
Meta title	WE WILL Tech Solutions (24 characters)
Meta description	Release verification, AI-assisted development, AI feature evaluation, release decisions and lean-team quality with Vibe Test and BCQ Expert Services. (149 characters)
Official address	https://wewill.tech/solutions/
Social image	Branded image generated for this page
Labels for Google	Service (×3), Organization
Headings	1 H1, 7 H2, 13 H3
On Google	Open to Google and listed in the sitemap
Links pointing here	30 links across the site

5.4 Resources

Main heading (H1)	Insights, quality thinking, and product lessons.
Meta title	WE WILL Tech Resources (24 characters)
Meta description	Insights on software quality, release confidence and the Business Care Quality methodology from WE WILL Technology. (115 characters)
Official address	https://wewill.tech/resources/
Social image	Branded image generated for this page
Labels for Google	CollectionPage, WebSite, Organization, BlogPosting (×2)
Headings	1 H1, 5 H2, 2 H3
On Google	Open to Google and listed in the sitemap
Links pointing here	24 links across the site

5.5 About

Main heading (H1)	About WE WILL Technology
Meta title	WE WILL Tech About (20 characters)
Meta description	WE WILL Technology is an Agentic Software Quality company. Meet the team and see how we connect quality evidence to release decisions. (134 characters)
Official address	https://wewill.tech/about/
Social image	Branded image generated for this page
Labels for Google	AboutPage, WebSite, Organization
Headings	1 H1, 3 H2, 3 H3
On Google	Open to Google and listed in the sitemap
Links pointing here	23 links across the site

5.6 Contact

Main heading (H1)	Let's Talk About Your Product's Quality.
Meta title	WE WILL Tech Contact (22 characters)
Meta description	Run a Guided Vibe Test or discuss a Business Care Quality requirement with WE WILL Technology. Tell us about your product and your next release. (144 characters)
Official address	https://wewill.tech/contact/
Social image	Branded image generated for this page
Labels for Google	ContactPage, WebSite, Organization
Headings	1 H1, 0 H2, 2 H3
On Google	Open to Google and listed in the sitemap
Links pointing here	60 links across the site

5.7 Blog

Main heading (H1)	Insights, quality thinking, and product lessons.
Meta title	WE WILL Tech Blog (19 characters)
Meta description	A curated blog from WE WILL covering software quality, release confidence, and GenAI-aware product work. (104 characters)
Official address	https://wewill.tech/blog/
Social image	Branded image generated for this page
Labels for Google	None yet
Headings	1 H1, 2 H2, 0 H3
On Google	Open to Google and listed in the sitemap
Links pointing here	13 links across the site

5.8 Article: The Triad Quality Framework

Main heading (H1)	The Triad Quality Framework
Meta title	WE WILL Tech Triad Framework (30 characters)
Meta description	A useful quality strategy balances user value, system integrity and business alignment. Neglecting one dimension weakens the whole release. (139 characters)
Official address	https://wewill.tech/blog/the-triad-quality-framework/
Social image	The article's cover image
Labels for Google	BlogPosting, Organization, Blog
Headings	1 H1, 4 H2, 0 H3
On Google	Open to Google and listed in the sitemap
Links pointing here	8 links across the site

5.9 Article: When software quality becomes a business decision

Main heading (H1)	When software quality becomes a business decision
Meta title	WE WILL Tech Quality Decisions (32 characters)
Meta description	Quality is not just a delivery checkpoint. It affects release confidence, trust, cost control and how fast a team can move without hidden risk. (143 characters)
Official address	https://wewill.tech/blog/when-software-quality-becomes-a-business-decision/
Social image	The article's cover image
Labels for Google	BlogPosting, Organization, Blog
Headings	1 H1, 3 H2, 0 H3
On Google	Open to Google and listed in the sitemap
Links pointing here	8 links across the site

5.10 Privacy Policy

Main heading (H1)	Privacy Policy
Meta title	WE WILL Tech Privacy Policy (29 characters)
Meta description	Privacy Policy for wewill.tech. The policy text will be supplied by WE WILL Technology. (87 characters)
Official address	https://wewill.tech/privacy/
Social image	Branded image generated for this page
Labels for Google	None yet
Headings	1 H1, 0 H2, 0 H3
On Google	Kept out of search results (noindex) until the legal text is ready; not in the sitemap
Links pointing here	12 links across the site

5.11 Terms of Use

Main heading (H1)	Terms of Use
Meta title	WE WILL Tech Terms (20 characters)
Meta description	Terms of Use for wewill.tech. The terms will be supplied by WE WILL Technology. (79 characters)
Official address	https://wewill.tech/terms/
Social image	Branded image generated for this page
Labels for Google	None yet
Headings	1 H1, 0 H2, 0 H3
On Google	Kept out of search results (noindex) until the legal text is ready; not in the sitemap
Links pointing here	12 links across the site

The sitemap file

This is the list Google reads to discover your public pages. The live site generates its own sitemap, so this is the list for your developers to publish at launch, in place of the current one that still lists the old one-section pages.

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
  <url><loc>https://wewill.tech/</loc></url>
  <url><loc>https://wewill.tech/vibe-test/</loc></url>
  <url><loc>https://wewill.tech/solutions/</loc></url>
  <url><loc>https://wewill.tech/resources/</loc></url>
  <url><loc>https://wewill.tech/about/</loc></url>
  <url><loc>https://wewill.tech/contact/</loc></url>
  <url><loc>https://wewill.tech/blog/</loc></url>
  <url><loc>https://wewill.tech/blog/the-triad-quality-framework/</loc></url>
  <url><loc>https://wewill.tech/blog/when-software-quality-becomes-a-business-decision/</loc></url>
</urlset>
```

The live robots.txt already points to /sitemap.xml, so it doesn't need to change.

SECTION 6

Easy to use and quick to load, for everyone

A site that's easy for everyone to use and quick to load is better for your visitors, and Google rewards it too. Along the way we fixed several small gaps from the old site.

Calmer and clearer. The endlessly scrolling testimonial rows are gone, replaced by three quotes that stay still and can actually be read. If someone has asked their device to reduce motion, the site's entrance animations switch off. The menu tells screen readers which page you're on, the mobile menu announces whether it's open or closed, and social links say they open in a new tab.

Quicker to load. Images declare their size so nothing jumps around while the page loads, and images further down the page only load when someone scrolls to them. The Vibe Test video shows a lightweight preview image and only loads YouTube's player when someone chooses to watch. The Vibe Test logo, which used to be a large file shown at a small size, now has a right-sized copy.

Tidier details. Two client logos whose descriptions named the wrong company now describe the right one, the copyright year is current, the broken Business-Care Quality and "original article" links are gone, and the WhatsApp button now uses a correctly formatted phone number (the old one had a space in it). Every page has exactly one main heading, and every description fits in full in Google.

Every image described. The 13 team photos, which had no text description on the old site, now have one for screen readers and Google Images. It currently reads "WE WILL team member", and can become each person's name and role.

SECTION 7

Arabic and English

Every page, including the new Vibe Test page, switches between English and Arabic with the EN | AR button in the header, and the whole layout flips to read right to left. The new copy has Arabic throughout, and we ran a terminology review so technical words are used consistently. For example, a *release* (a version, الإصدار) is kept distinct from a *launch* (going live, الإطلاق); QA is ضمان الجودة; BCQ is جودة رعاية الأعمال; and GO / NO-GO is spelled one way everywhere. We'd still ask a native-speaking member of your team to give the Arabic a final read before launch.

One important SEO point for Saudi Arabia. Today Arabic is switched inside the browser on the same web address, so Google only ever sees, and ranks, the English version. Since Saudi Arabia is your priority market, we recommend giving Arabic its own addresses (for example wewill.tech/ar/solutions/), linked to their English twins with "hreflang" tags. That tells Google which language version to show to which searcher, so Arabic searches can find you too. It's a platform decision for your team.

TO CLOSE

A final word

Your website is now clearer, more focused and better prepared for Google than before, and it still looks and feels like WE WILL. A CTO landing on it can understand in seconds what you do, recognise their own release situation, see real clients and real evidence, and take one clear next step: running a Guided Vibe Test.

A few details still need to be added from your side. Wherever the site needs a fact only you can confirm, we've left a clearly marked placeholder rather than guess: approval of the draft wording, product screenshots and real receipts, evidence for the AI use cases, names and roles for testimonials and team photos, a short company background, two missing client logos, and your legal text. Your developers will also need to connect the contact form's new request type on the live server and publish the new sitemap and redirects. Send them over whenever they're ready and we'll drop them straight in.

We'd love to walk you through the live preview and answer any questions about this report. Thank you for trusting us with it.

Let's keep growing together.

Questions about anything in this report? We are always just one message away.
